

More about our company

Techman Robot Inc.
Distributed by Valk Welding

Techman Robot Inc. Distributed by Valk Welding was established in 2018 as a new branch of the Valk Welding Group. This branch specializes in collaborative robots, also known as cobots. The cobots are equipped with integrated vision systems and can optionally be provided with an AI module for inspection and intelligent automation. They are cost-effective, user-friendly, and do not require additional safety measures. These cobots are increasingly used on assembly lines for various tasks.

Techman Robot Inc. Distributed by Valk Welding is located in Alblasterdam and operates as an independent entity within Valk Welding. It has its own facilities, including a demo room and a training center. The close cooperation with the European branch of Techman promotes the sale of cobots throughout Europe.

These cobots, known for their easy programming and innovative vision capabilities, are designed to work safely alongside humans without additional safety measures. They are a product of Techman Robot, which was founded in 2012 by Quanta Storage Inc., with the aim of improving automation for Industry 4.0 and beyond.

Valk Welding develops and builds turnkey welding robot systems for small to medium production requirements and is your partner for all your welding needs.
